# OUTLINE

---

- Executive Summary
- Introduction
- Methodology
- Results
  - Programming Language Trends
  - Database Trends
  - Dashboard
- Discussion
  - Findings & Implications
- Conclusion
- Appendix

# EXECUTIVE SUMMARY

---

- Data collected from a Stack Overflow survey
- Majority of developers are young, male, and from developed countries
- Similar distribution of applications known and wanted to learn in the future
- C+ is the dominant programming language
- Washington DC is premiere tech hub

# INTRODUCTION

---

- Stack Overflow's annual survey is the largest survey for people who code around the entire world
- Over 65,000 respondents for this survey year
- Provides current statistics as well as insight and predictions for the future
- Project Goal:
  - Glean insights on the current and future programming applications which are at the forefront of development

# METHODOLOGY

---

- Collect Survey Data
  - Web scraping job board postings
  - Stack overflow developer survey
- Data wrangling
  - Removing/replacing invalid values was vital
- Exploratory Data Analysis
  - Understand data set and which variables can produce useful information
- Data visualization
  - Produce figures which are more digestible than raw data

# RESULTS

---

# PROGRAMMING LANGUAGE TRENDS

## Current Year

Top 10 Languages respondents have worked with

## Next Year

Top 10 Languages respondents want to work with

# PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- Javascript is a leading language for current year and next year
- High interest in Python for the future
- C# and Typescript also popular

## Implications

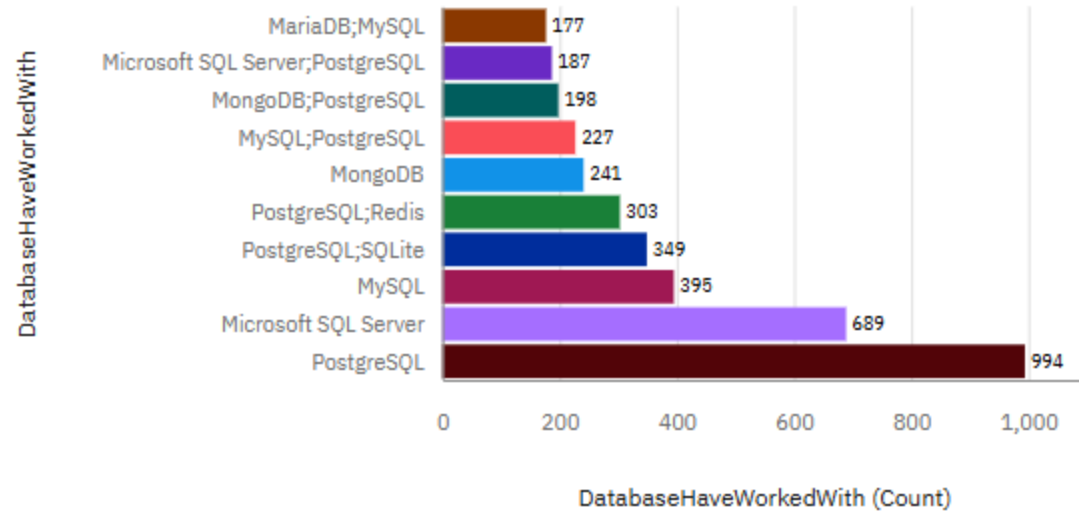

- Python developers are at a premium currently but will be more popular in the future

# DATABASE TRENDS

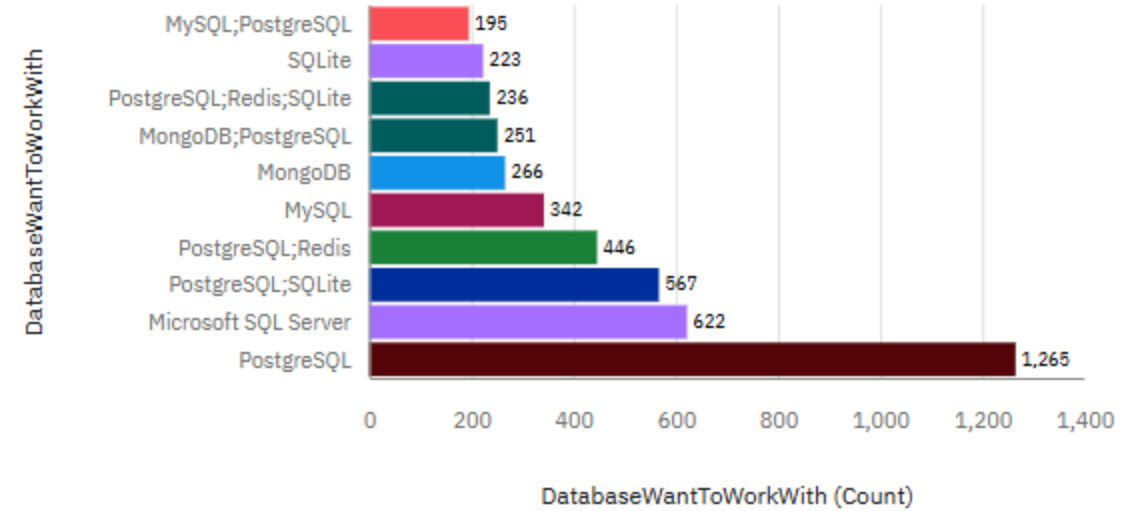

## Current Year

Top 10 Databases respondents have worked with

## Next Year

Top 10 Databases respondents want to work with

# DATABASE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- PostgreSQL is most popular database and will continue to be
- Microsoft SQL Server, MySQL, and MondoDB have consistent value
- More interest in learning Redis and SQLite in the future

## Implications

- Knowing PostgreSQL seen as the most valuable asset by developers
- Strong desire to learn up-and-coming database languages (i.e. Redis and SQLite)

# DASHBOARD

---

<https://github.com/ttrupke/capstone/blob/3b7629ef16861477706c9af0aec7941c3bf66ac5/Technology%20Dashboard.pdf>

Current Technology Usage

Future Technology Trend

Demographics

+

Respondent distribution of Age

Age

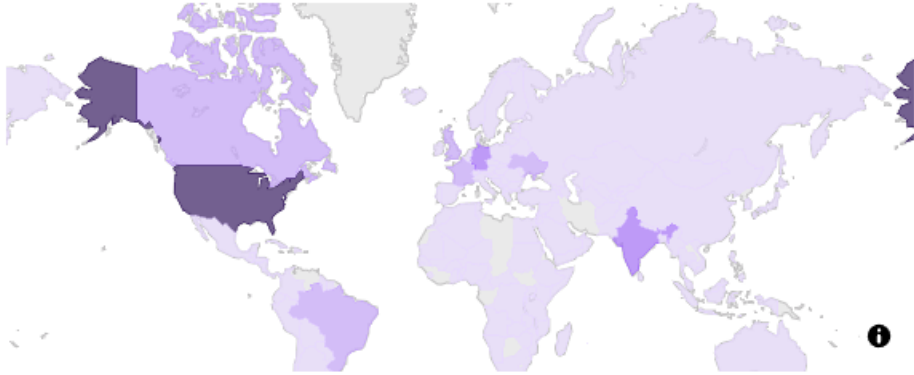

- Prefer not to say
- 65 years or older
- Under 18 years old
- 55-64 years old
- 45-54 years old
- 18-24 years old
- 35-44 years old
- 25-34 years old

Respondent count by Country

Country (Count)

1 3,441

Respondent distribution of Education Level

Respondent distribution of Age classified by Education Level

Age

- 18-24 years old
- 25-34 years old
- 35-44 years old
- 45-54 years old
- 55-64 years old
- 65 years or older
- Prefer not to say
- Under 18 years old

Ski

# DISCUSSION

---

- Applications desirable currently versus in the future are mostly consistent
- Bachelor's degree is most common level of education
- Majority of Developers are between 25 and 44
  - Young professionals are looking to improve their skills

# OVERALL FINDINGS & IMPLICATIONS

---

## Findings

- Javascript and PostgreSQL are the most important applications
- Developer age skews on the younger side
- Master's degree not needed for employment

## Implications

- Web based programming (Javascript) will continue to be the most marketable
- Barrier to entry into developer profession for older workers
- Not worth it to earn an advanced degree

# CONCLUSION

---

- There are very specific conditions/qualifications for developers
- Future trends suggest knowing as many application as possible will be preferred
- Spend time learning applications rather than university coursework.

# APPENDIX

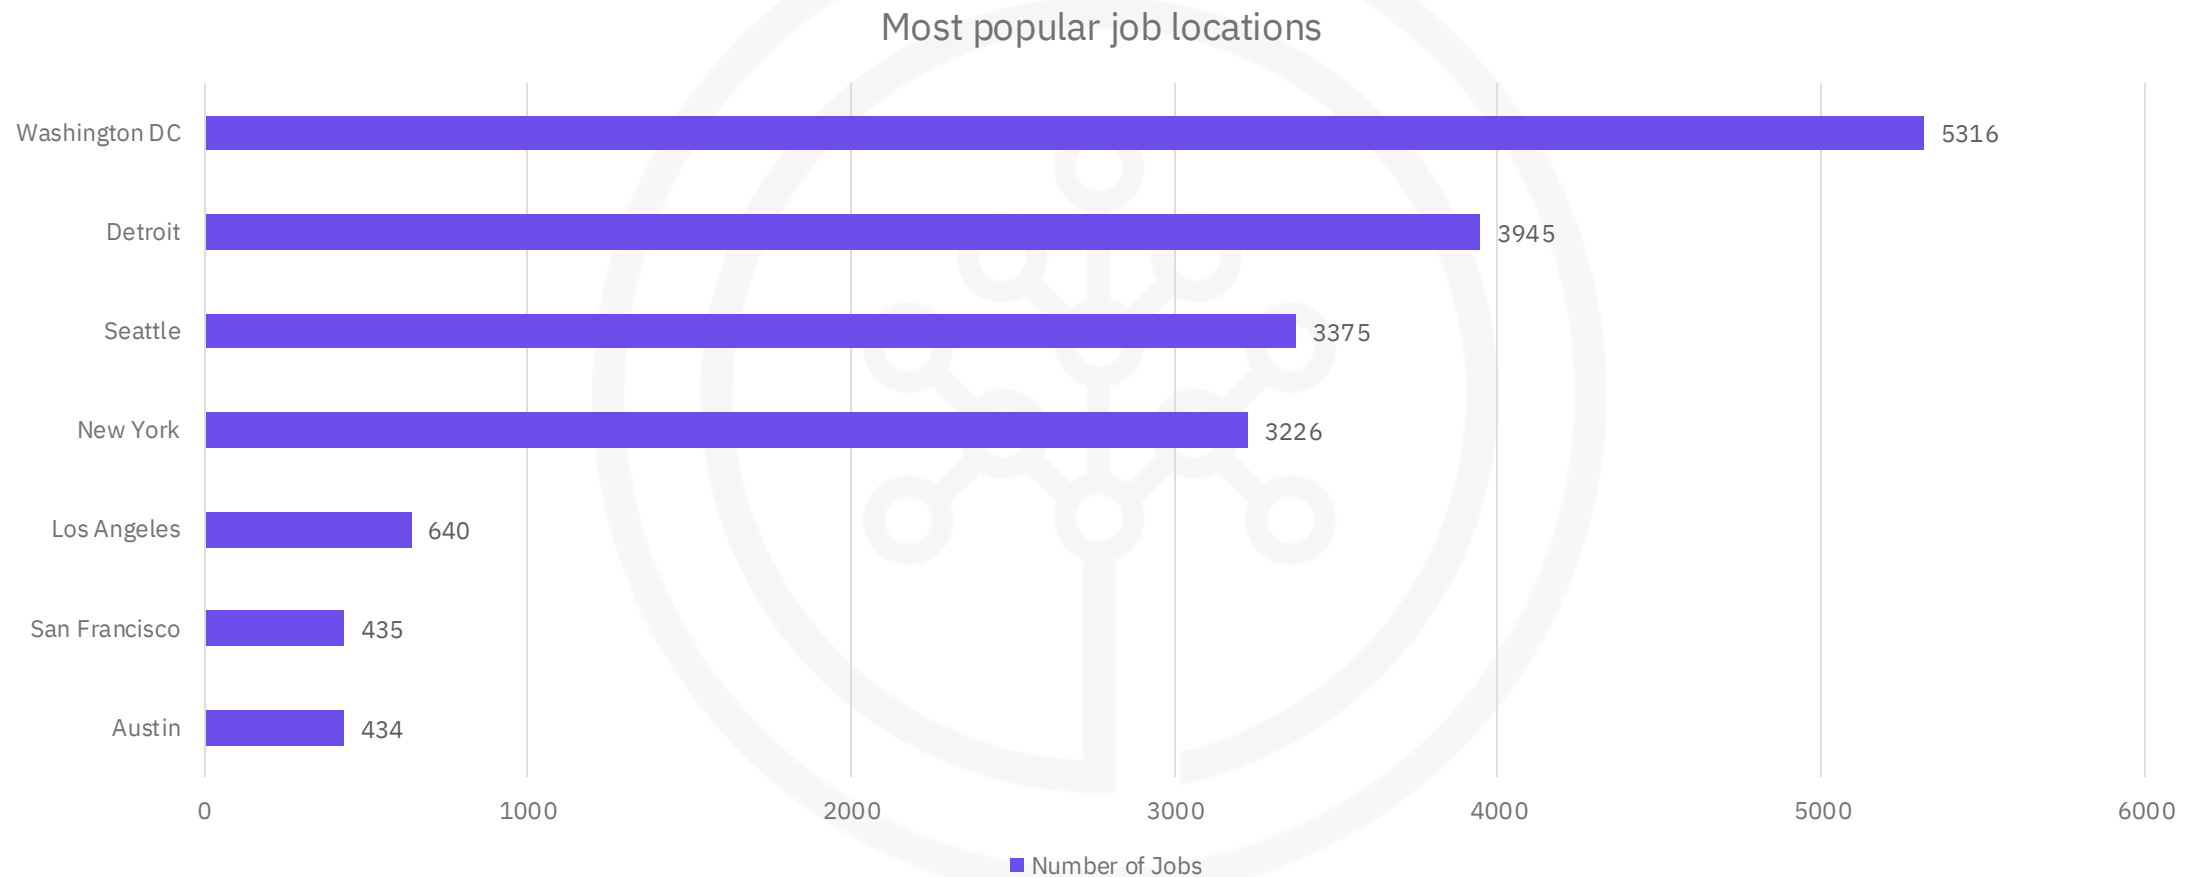

---

- Job postings chart
- Popular languages chart

# JOB POSTINGS

# POPULAR LANGUAGES

Salary for various programming languages
